

Telecommunications

Say "Hello" to Flexible Telecommunications Training

Ask any group of industry experts to describe "Telecommunications" and you will get a different answer from each member of the group. Telecommunications covers a broad spectrum of subject areas including mobile phones, switching, signal processing, satellite communications, RF communications, digital data transmission, fibre optics, Internet, and microwave.

E & L-Nida recognises that one Telecommunications course will not fit all. E & L-Nida's Telecommunications

course is designed in a modular format to support your unique telecommunications training needs. The course teaches a standard core of telecommunications fundamentals followed by a selection of advanced subject areas that can be mixed or matched as needed. Developed from industry input and based on performance outcomes, the E & L-Nida Telecommunications course provides your students with hands-on training applicable to today's industry standards.
